Financial Report 31.03.2024

The profit for the period before tax is USD 4 521 598 (USD 4 906 213 - 31.03.2023). Return on equity before tax was 14.3% (16% in Q1-2023). The bank has not any non-performing loans and zero credit losses during the period.

The major global geo-political tensions, first and foremost caused by the Ukrainian-Russian war the Israel/Hamas/Hizbollah conflict and the Red Sea unrest caused by attacks for the Yemen based Houtis continue to have a propound effect on the shipping markets – and more or less entirely with a positive sign for the shipping markets.

The various disruptions causing longer sailing distances and congestion seem to have a long-lasting effect on the markets. There is always a certain risk associated with long horizons in shipping, however, it seems to be a common view that the various sanctions imposed towards Russia will continue to be in force even after the war has ended.

The tanker market, both the transport of heavy oil and petroleum products, is experiencing stable earnings over time at a historically high level, and with a corresponding increase in ship values, Clarksons SH Price Index suggest a price increase 3 months trend of 3%.

The dry cargo market has a somewhat more varied performance than tank, but on average the earnings in the trip charter market are approx. 20% so far this year above the same figure from 2023. The capesize segment has surprised positively and contributed to this development, among other things due to a marked increase in Chinese ore imports from Brazil (with a corresponding increase in export of steel products)

In the dry cargo segment, there has also been great interest in buying second-hand ships, so great in fact that the trend in 2024 is ahead of the record year 2022 when 60.9 million dwt were traded. Not surprisingly, the values of 5- and 10-year-old tonnage have reached record levels.

Much has been said and written about the container market in the post pandemic period. We dare say that the positive trend we saw during the 4th quarter of 2023, and which has continued into 2024 has come as a surprise to many. For example, a 6,800 TEU earned in 2023 an average of USD 33,000/day and the earnings so far in 2024 is USD 44,500/day. We admit that there are many uncertainties in the way forward, including a total order book for the segment of over 20% of the sailing fleet and the question how and when the older part of the fleet will be phased/forced out of the market, but the positive development so far has once again emphasized the unpredictability of seaborne transport.

The global economic growth rate (GDP) continues to move sideways with a growth rate in the region of 3.0/3.2% (OECD). China and the US are at 5.3 and 3% respectively in the first quarter of 2024, but the Eurozone continues to deliver disappointing figures around 0%. Looking at the figures for industrial production, the picture is basically the same. Flat or event sliding numbers for the Eurozone and the western hemisphere, while China, Taiwan and South Korea are showing growth. Isolated these facts are not good news for the shipping markets but as pointed out above, the various disruptions caused by geopolitical disturbances are leading to more ton-miles.

Profit for the period (01.01-31.03)

The profit for the period before tax is USD 4 521 599 (USD 4 906 213 - 31.03.2023) and profit after tax is USD 3 391 199 (*) (USD 3 679 592- 31.03.2023).

Net interest income and related income totalled USD 6 566 272 (USD 6 656 675), and other Income (including financial derivatives and fixed income instruments) was USD 356 379 (USD 214 254).

Operating expenses before impairments and losses totalled USD 2 238 239 (USD 2 126 551). The Cost/Income ratio came in at 32.3% (31%).

Loss allowance (Expected Loss) increased with USD 162 812 (decreased USD 161 835), due to increased lending. Credit Loss (Write Offs) was USD 0 (USD 0).

Net interest income and related income

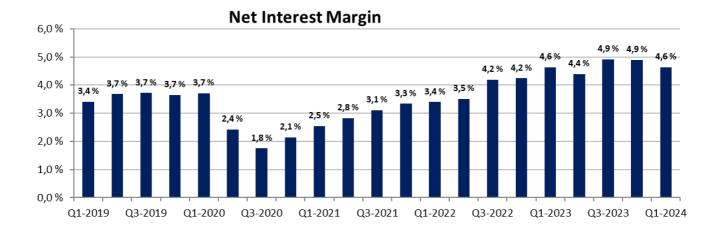

Net interest income and related income totalled USD 6 566 272 in Q1 (USD 6 656 675 in Q1 2023).

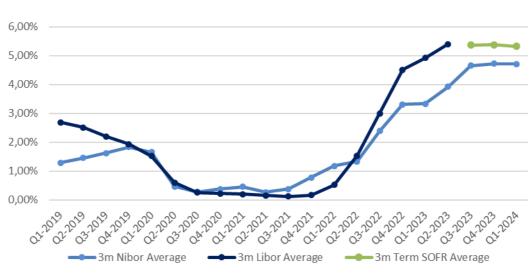

Net Interest Income and Customer Lending

Net interest margin is 4.6% (unchanged from in Q1-2023), down from 4.9% in Q4-2023, due to loan disbursements late in the quarter as well as downward pressure on loan margins.

Money market rates (daily average) in USD and NOK are stable

USD and NOK Short Term Interest Rates

(Source: Infront, Maritime & Merchant Bank ASA)

Net other Income

Net other income amounted to USD 356 379 in Q1 2024 (USD 214 254 in Q1-2023).

^{..}æå

Value adjustments on derivatives and hedging instrument in Q1 was USD 153 657 (USD 89 297 in Q1-2023).

Net value adjustments on bonds was USD 109 193 (USD -17 333 in Q1-2023).

The principle of assessing financial instruments measured at fair value may lead to significant variation of the Bank's result between quarters.

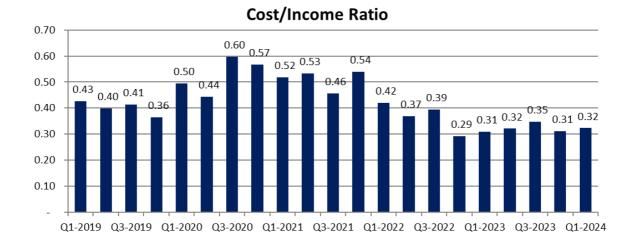

Net commissions amounted to USD 93 529 in Q1 (USD 142 293 in Q1-2023).

Total operating expenses before impairments and losses

Operating expenses before impairments and losses totalled USD 2 238 239 in Q1 (USD 2 126 551 in Q1-2023). Salaries and personnel expenses, including social costs, amounted to USD 1 635 811 (USD 1 474 933 in Q1-2023) and account for the largest proportion of the overall operating expenses.

Total depreciation and impairment of fixed and intangible assets amounted to USD 81 764 (USD 110 681 in Q1-2023). The Cost/Income ratio came in at 32.3% in Q1 (31% in Q1-2023).

Operating result

Operating result in Q1 amounted to USD 4 684 411 (USD 4 744 379 in Q1-2023).

Loan and Loan Loss provisions

Maritime & Merchant Bank ASA has lent USD 378 747 464 (USD 349 251 735 in Q1 2023) to customers.

The Bank has made USD 1 897 341 (USD 1 752 184) in loss allowance (IFRS 9). Change in loss allowance this quarter amounts to USD 162 813 (USD -161 835).

The credit quality of the majority of the loans (measured by PD – Probability of Default) to the bulker and container segment is on satisfactory levels, as we have seen improvement in the bulker rates compared to last year. The credit quality (measured by PD) of the tanker portfolio has remained strong due to the rates. The credit quality of the offshore loans are also very satisfactory.

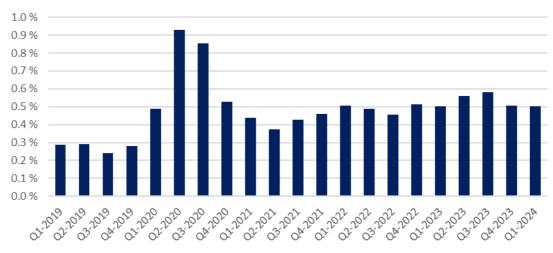

Higher Loss Allowances at the end of Q1 compared to those at the end of Q1 2023 is due to increased lending.

All commitments (100 %) are in step 1 (100% in Q3-2023).

| The ballk has no defaulted | The bank has no defaulted of hon-performing loans by the end of the Q1. | | | | | | | |

*Loss allowance in step 2 is a result of anticipated migration in the negative macro scenario

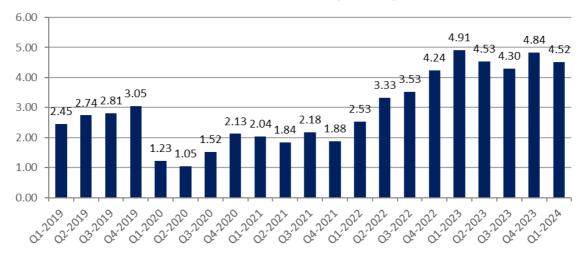

Loss Allowance/Lending (in %)

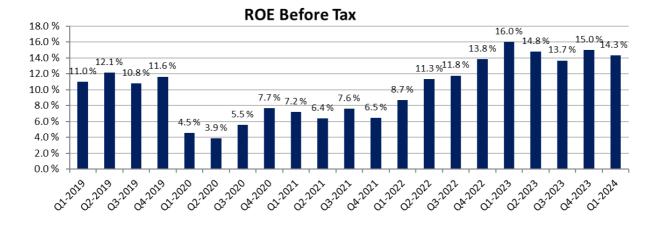

Profit before tax

Profit before tax amounted to USD 4 521 598 Q1 (USD 4 906 213 in Q1-2023). Return on equity before tax was 14.3% (16% in Q1-2023).

Profit Before Tax (USDm)

Deferred Taxes and payable tax

The Bank operates with USD as functional currency.

In the tax accounting, both P&L and the major part of assets and liabilities are being converted from USD to NOK, including any effect currency fluctuations would have on the equity of the Bank.

The volatility of the NOK against the USD has given the Bank an unintended volatility in the tax expense, due to currency gains/losses related to our equity.

The Bank has started a process for a rule adjustment for the basis of tax calculation that prevents unintended effects for the future.

Common 25% corporate tax rate is used in the first quarter of 2024.

If there is no decision (or a negative one) from the Ministry of Finance within the fiscal year, we will incorporate a full agio effect in Q4 2024. The agio effect (extra taxable income/cost) will be a result of the USDNOK exchange rate at year end. USDNOK 31.12.2023 was 10.16715, and ended at 10.7939 as of 31.03.2024.

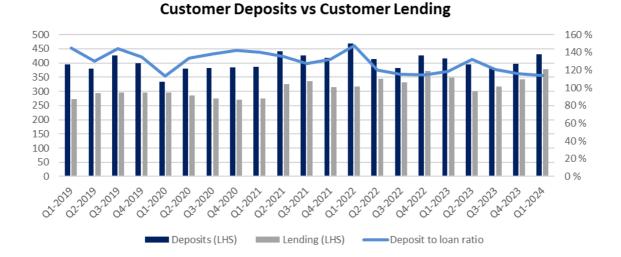

The agio effect (unintended taxable income/cost) for YTD 2024 is positive NOK 81 103 716. This "phantom" income will result in an increased tax of NOK 20 275 929 (USD 1 878 462).

See Note 5, Tax Calculation.

Deposit and Liquidity

Customer deposits amounted to USD 431 453 157 in Q1-2024 (USD 414 913 238 in Q1-2023).

The deposit to loan ratio was 114% at the end of Q1 2024 (119% in Q1 -2023).

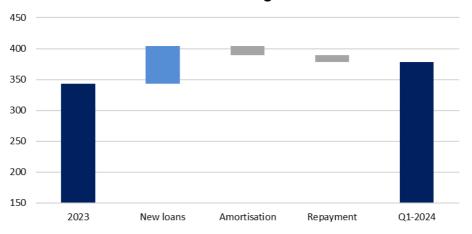

The liquidity situation has been good throughout the quarter. Surplus liquidity of about USD 211 million was mainly invested in interest-bearing securities, deposits in major banks and in Bank of Norway. The securities investments are in bonds with good liquidity and very low risk.

The Bank's short-term liquidity risk measured by LCR (Liquidity Coverage Ratio) was 710% (above a minimum requirement of 100%), and the long-term liquidity risk measured by NSFR (net Stable Funding Ratio) was 158% (above a minimum requirement of 100%).

Total Assets and Lending

Total assets ended at USD 590 123 284 in Q1 2024 (USD 577 592 048 in Q1 2023).

Lending to customer increased from USD 342 910 692 in Q4 2023 to USD 378 747 464 in Q1 2024 (USD 349 251 735 in Q1-2023).

Customer lending in 2024

<u>Solvency</u>

Core equity ratio (CET1) was 32.0% 31.03.2024 (35.0% 31.03.2023). The Bank has not issued any subordinated or perpetual bonds. The Bank paid USD 5 159 995 in dividend for 2023 in April-2024.

Risk factors

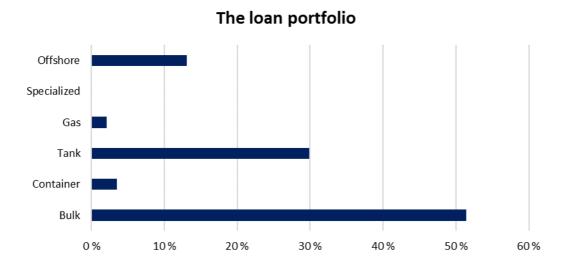

Credit risk

The average weighted quality of the portfolio is moderate risk, and the portfolio has a strong concentration around the mid-point.

All commitments are secured with 1st priority mortgage on vessels, and the large majority of those were secured within 50-55% of appraised values when granted. In combination with an estimated moderate Default Probability, the moderate loan-to-value ratios provide for a sound credit portfolio with a limited potential for future losses, in particular since the vessels' values for most clients have a good margin in relation to the outstanding exposures.

In addition to estimating the Default Probability, we also estimate the Loss Given Default on each exposure. Based on the low leverage of financing in combination with financing non-specialized tonnage with strict covenants, the Loss Given Default for the loan portfolio is satisfactory.

The Bank's estimated risk cost, Expected Loss, is calculated as Probability of Default multiplied with Loss Given Default. It is included in all internal return on capital estimations in connection with granting new loans. The portfolio is distributed in risk classes according to collateral and internal risk classification. The loan portfolio is diversified and is distributed on bulk carriers (51.3%), tankers (29.9%), container vessels (3.5%), LPG (gas) (2.1%), offshore/supply (13.1%) and specialized (0%).

The Bank's internal credit strategy has limits for maximum exposure to the various shipping segments, and Acceptable Risk Criteria form guidelines for the lending strategy.

<u>ESG risk</u>

The International Maritime Organization's (IMO) regulations with regards to the Carbon Intensity Indicator (CII) was introduced on 1 January 2023. This measures how much CO2 each ship emits annually. The vessels have been measured throughout 2023 for a 12-month emission period based on a detailed and extensive formula. Each vessel has been assigned a rating as of 31.3.2024 from A to E based on the prior year's data.

Vessels that received an A to C rating are in the clear and compliant, however, vessels receiving a D rating for three consecutive years or an E rating will have to put forward a corrective action plan on how to receive a C rating or better during the coming 12 months. Example of a corrective action plan might be installation of Engine Power Limitation (EPL), permanent slow steaming, or for the vessel to change fuel. The trajectory to obtain the rating classes A to E is lowered each year, thereby becoming increasingly rigorous towards 2030. The Bank and the shipping industry do not know yet how these CII ratings will impact second hand values and time charter rates, if at all, and we will monitor this closely throughout the year to be able to pick up on trends in the market that might influence our portfolio and when doing new facilities.

Our customers are now reporting on the ratings, and we have not been made aware that any of our financed vessels have received an E rating.

<u>Liquidity risk</u>

Maritime & Merchant Bank ASA has adopted guidelines for management of the Bank's liquidity position to ensure that the Bank maintains a solid liquidity. The Bank has a low liquidity risk profile. Main funding sources are equity and NOK deposits. The Bank has liquidity portfolio/buffers well above minimum requirement. Liquidity stress tests show satisfactory liquidity.

(1) % of total assets

Interest rate risk

Maritime & Merchant Bank ASA has defined guidelines that set limits for the maximum interest rate risk. Any exposure exceeding the interest rate risk limits shall be mitigated by using hedging instruments.

<u>Market risk</u>

Maritime & Merchant Bank ASA has developed guidelines and limits for counterparty exposure, maturity per counterpart, average duration of portfolio and foreign exchange risk.

AML risk:

Risk related to money laundering and terrorist financing represents an inherent operational risk. The bank works systematically to prevent products and services from being used to criminal activity. To understand the risk in own business, a business-oriented risk assessment has been prepared. The risk assessment sheds light on how the business can be misused for money laundering or terrorist financing, hereunder including vulnerabilities of the bank, and it forms thus the basis for the customer measures which are implemented. The risk assessment is based on external sources, own insight and experience. The assessment is updated at least annually, but more frequently in connection with relevant changes in threats against or vulnerabilities of the bank, e.g. new relevant criminal modes that the bank becomes aware of or new systems taken into usage.

Systematic work is being done to strengthen professional competence in the day-to-day execution of antimoney laundering work. All employees receive regular training in the money laundering regulations, both through e-learning and classroom teaching.

Customer portfolios and customer information will be regularly reviewed and followed up. The bank must know its own customers and information is therefore obtained about the customers both at establishment and on an ongoing basis in the customer relationship. The knowledge of who the customers are and how

they plan to use the bank will contribute to reveal whether a customer's use of the bank can entail a risk of money laundering or terrorist financing.

All transactions are subject to transaction monitoring. If something suspicious is discovered, this is investigated in more detail and possibly reported to Økokrim.

Sanction risk:

The Bank is subject to the Sanctions Act, and through it imposed a number of duties to prevent violations of or circumvention of international sanctions. The sanctions regulations are complex and changing rapidly. That is why it is important that the bank has a focus on and knowledge of sanctions and regulations, and has a risk-based routine work in place.

In order to comply with the Sanctions Act, there is close follow-up of own customers through familiarity with customers' business, monitoring of transactions and screening of international payments against sanctions lists. A separate risk assessment relating to sanction risk is prepared.

Operational risk

Maritime & Merchant Bank ASA has established operational risk policy and guidelines. Contingency plans have been established, and insurance (professional responsibility, crime and Board of Directors responsibility) is purchased in order to reduce risk.

<u>Ratios</u>

<u>Outlook</u>

The shipping markets are generally performing at a high level. This situation stimulates for further investments in the shipping sector. The bank feel it is well placed to serve our clients domestically and internationally and to contribute for materializing new projects going forward. In a rapidly changing world the shipping industry has once again maintained its position as a key element for securing critical supplies to the population and the industry of the world

Notes 31.03.2024.

Note 1, Reporting entity

Maritime & Merchant Bank ASA is a company domiciled in Norway. The Bank's registered office is at Haakon VIIs gate 1, 0161 Oslo. The Bank's lending is towards the corporate market.

Note 2, General accounting principles

The interim report for the first quarter of 2024 is prepared in accordance with Regulations on annual accounts for banks, credit institutions and financing companies (The annual accounts regulations). The interim report for the first quarter of 2024 is prepared using the same accounting principles and calculation methods as described in the Annual Report 2023.

Note 3, Functional and presentation currency

These consolidated financial statements are presented in USD, which is the Bank's functional currency. The Bank's taxation currency is NOK. USDNOK exchange rate 31.03.2024: 10.7939 (31.12.2023: 10.16715)

RISK

Note 4, Risk

Risk Management and Capital Adequacy

The Capital Adequacy figures for Maritime & Merchant Bank ASA are based on the calculation by means of the standardised approach.

Credit risk

The Bank has chosen the basic approach for calculation credit risk (Risk-Weighted Assets).

Operational risk

The Bank has chosen to apply the basic approach under Pilar 1 for calculating operational risk. This applies a capital requirement of 15 per cent of the annual income reported in the last three years.

Market risk

The market risk of the Bank is modest and is calculated using the standardised approach in Pilar 1.

Credit Risk

Credit risk is the major risk to the Bank. Maritime & Merchant Bank ASA may face a loss if the borrower is not able to pay interest or principal as agreed upon, provided the pledged collateral is not sufficient to cover the Bank's exposure.

The Bank monitors market developments in segments where it has exposure and takes a proactive approach towards the risks taken.

The Bank's internal credit strategy has limits for maximum exposure to the various shipping segments, and Acceptable Risk Criteria form guidelines for the lending strategy.

The Bank uses an internally developed scorecard model for assessing the credit risk in the loan portfolio. The scorecard model predicts Probability of Default (PD), Loss Given Default (LGD) and risk class (from 1 to 10). Default is failure to satisfy the terms of a loan obligation or failure to pay back a loan.

Significant judgements are required when assessing models and assumptions, and resulting estimates are thus uncertain in nature. The model is based on experience and criteria well known in scoring models. The model is validated on a regular basis.

Forward looking factors, like expected freight earnings and ship values, are based on one year forward estimates. Time charter rates for each specific segment and interest rates that are used in the model are those prevailing at the time of scoring.

Input in the scoring model for establishing the PD for one specific exposure can either be the actual earnings based on freight contracts entered into, or shipbrokers earnings estimates for the next 12 months, normally expressed in the time charter rates for the period going 12 months forward.

When a loan is granted, the PD is estimated for the full tenor of the loan, and projected future cash flow is based on long term time charter rates for similar tenor (if available) in combination with consideration of low-rate scenarios.

Risk classification is done once per year as a minimum in connection with annual renewal of exposures, or more frequently if there are shifts in input factors which are not regarded as temporary.

Risk classes and credit score:

| Very low risk | Credit score: 1-2 | PD: | 0.00 - 0.25% |
|---------------|---------------------|-----|--------------|
| Low risk | Credit score: 3-4 | PD: | 0.25 – 1.00% |
| Medium risk | Credit score: 5-7 | PD: | 1.00 - 3.00% |
| High risk | Credit score: 8-9 | PD: | 3.00 - 8.00% |
| Loss exposed | Credit score: 10-11 | PD: | > 8.00% |

Factors in scorecard PD - model:

Quantitative factors:

- Loan to value (LTV) Value Adjusted Equity
- Interest coverage Cash flow to support interest payment
- Instalment coverage Cash flow to support instalments
- Current Ratio
- Free Cash

Qualitative factors

- Corporate structure
- Ownership
- Technical management
- Commercial management

Factors in LGD model:

- Age of vessel
- Liquidity of vessel type (specialised tonnage)
- Yard/Country
- Net loan exposure above scrap value
- Enforcement cost
- Jurisdiction
- Corporate complexity
- Covenant Structure
- ESG

Expected Loss (EL)

EL = PD * LGD * EAD EAD = Exposure at Default (Notional + Accrued Interest - Cash Reserves)

Loss allowance

The EL is performed on an individual basis. After the transition to IFRS 9, provisions have been presented as expected loss over 12 months (Step 1) and expected loss over the life of the instrument (Step 2).

Non-performing commitments (Step 3) are commitments where the customer has not paid due instalments on loans within 90 days of maturity.

If credit risk has increased significantly after initial recognition but there is no objective proof of loss, an allowance of expected loss over the entire lifetime ("Step 2") has to be made. The individual loss provisions under IAS 39 did not change materially upon the transition to IFRS 9 ("Step 3").

In assessing what constitutes a significant increase in credit risk, the Bank, in addition to the standard's presumption of financial assets that have cash flows that have been due for more than 30 days are subject to significantly increased credit risk, assumed qualitative and quantitative indicators. The most important quantitative indicator the Bank assess is whether it has been a significant increase in credit risk determined by comparing the original likelihood of default and Loss Given Default ("PD x LGD") with the Probability of Default and Loss Given Default ("PD x LGD") at the reporting date. However, when assessing significant increase in credit risk for IFRS 9 purposes, Loss Given Default is not included in the assessment. Based on this the Bank has defined that a doubling in the Probability of Default or an absolute change of 1% constitutes a significant increase in credit risk.

Reclassification of commitments from Step 2 to Step 1, is based on an individual assessment. However, there must be some objective evidence that the commitment has recovered.

The Bank follows qualitative and quantitative indicators on a regular basis and in any situation where there is a suspicion that there have been conditions of negative importance for the commitment/customer.

Macro scenarios

Expected Loss from the Bank's risk score model will be adjusted with a macro scenario factor (MF). The Bank estimates three macro-economic scenarios consisting of factors that will or can have an impact on shipping markets and value appraisal of vessels financed in our portfolio in the respective markets. Each scenario gets assigned a probability and a factor. The factor represent change in Expected Loss or Loss Allowance. The forecast, probability assignment and factor estimation are based on own judgment and experience.

The following factors are included in the macro evaluation process:

- Demand for seaborn shipping (World growth (GDP))
- Supply: Orderbook (shipbuilding), scrapping and idle capacity (utilization)
- Cyclicality (we assume shipping is cyclical and mean reverting)
- Geopolitical and other factors

The probability weighted macro factor (MF) will be multiplied with the Expected Loss and give Loss Allowance (or Macro Scenario adjusted Expected Loss). The factor (MF) is calculated to be 1.597.

Exposure in the scenario model is the same as at 31.03.2024.

| LOSS Allowance and impa | | | | | |
|-------------------------|------------|------------|------------|------------|------------|
| Loss allowance | 31.03.2024 | 31.03.2023 | 31.12.2023 | 31.12.2022 | 31.12.2021 |
| Step1 | 1 421 328 | 1 205 351 | 1 298 277 | 1 345 649 | 618 860 |
| Step2 | 476 013 | 546 833 | 436 250 | 568 370 | 826 436 |
| Step3 | 0 | 0 | 0 | 0 | 0 |
| Sum | 1 897 341 | 1 752 184 | 1 734 527 | 1 914 019 | 1 445 296 |
| Allowance/Loan Ratio | 0.50 % | 0.50 % | 0.51 % | 0.51 % | 0.46 % |
| Impairments | 0 | 0 | 0 | 0 | 0 |

Loss Allowance and Impairments

The loss allowance has increased since year-end 2023 due to a higher loan portfolio.

Loans where no loss provision has been recognized due to collateral:

31.03.2024: 0 31.03.2023: 0

Remaining exposure from credit impaired loans and loss exposed loans:

| 31.03.2024 | Gross Loans | First-Priority pledge in vessel | Cash Pledge | Other Collateral |
|--|-------------|------------------------------------|-------------|------------------|
| Remaining exposure from credit impaired loans | 0 | 0 | 0 | 0 |
| Loss exposed loans | 0 | 0 | 0 | 0 |

| 31.03.2023 | Gross Loans | First-Priority pledge in vessel | Cash Pledge | Other Collateral |
|---|-------------|---------------------------------|-------------|------------------|
| Remaining exposure from credit impaired loans | 0 | 0 | 0 | 0 |
| Loss exposed loans | 0 | 0 | 0 | 0 |

Loss allowance sensitivity

The macro scenarios impact on Probabilities of Default (PDs) result in the following sensitivity in Expected Loss Allowance calculation.

| | Expected |
|-------------------|----------------|
| Scenario | Loss allowance |
| Vessel value up | 1 174 000 |
| Unchanged | 1 188 000 |
| Vessel value down | 2 641 500 |

Interest Rate Risk

Maritime & Merchant Bank ASA has defined guidelines that set limits for the maximum interest rate risk. All exposure on the balance sheet and outside the balance sheet will be assessed, and any exposure exceeding the interest rate risk limits shall be mitigated by using hedging instruments. Routines have been established for on-going monitoring and reporting of the interest rate risk to the Board of Directors.

Reference rates

The Bank has assets, liabilities and derivatives linked to current money markets reference rates (SOFR, NIBOR and EURIBOR). USD Libor were replaced with a new reference rate in June 2023 (SOFR). NIBOR and EURIBOR reference rates might be replaced with other reference rates going forward. Changes in reference rates can have an impact on interest income, interest expenses, fair value of derivatives and financial assets/liabilities.

Currency Risk

All exposure on the balance sheet, outside the balance sheet and estimated income and expense items will be identified. Market exposure will be limited and within limits and authorisations granted by the Board. Routines have been established for on-going monitoring and reporting of the currency risk to the Board of Directors.

Funding in NOK is swapped to USD using cross currency basis swaps, with duration around 3 years. Using cross currency swaps match funding in NOK with lending in USD. Assets and liabilities are currency matched. The Bank has income in USD and most of the operating cost in NOK. Current strategy is to hedge between 0 and 12 months forward.

Calculated tax will be affected by changes in USDNOK exchange rate (see note 5)

<u>Liquidity Risk</u>

Maritime & Merchant Bank ASA aims to maintain a low liquidity risk, which means high liquidity buffers and good deposit coverage.

The Bank's liquidity level is assessed by calculating the Liquidity Coverage Ratio (LCR) and the Net Stable Funding Ratio (NSFR). These ratios describe the short liquidity level and the level of stable funding.

The Bank calculates liquidity surplus, which appears as available funding less future liabilities within the defined time interval and required liquidity buffers.

Maritime & Merchant Bank ASA has adopted guidelines for management of the Bank's liquidity position to ensure that the Bank maintains a solid liquidity.

Operational Risk

Operational risk is the risk of direct or indirect loss resulting from inadequate or failed processes or systems, from human error, fraud, or external events including legal risk, compliance risk and reputational risk. This type of risk also encompasses administrative risk, i.e. that the day-to-day operations of the Bank do not function properly.

The Bank measures operational risk through incident reporting on main operational areas. The management team handle incidents in the management meetings. This incident reporting is summarized and communicated to the Risk Committee.

The Bank reduces operational risk through prudent management and supervision by establishing efficient control procedures, a well-established set of routines, a compliance function, as well as insurance cover against attempts at defrauding the Bank.

| Basis for Tax Calculation | 4 521 598 | 48 805 677 |
| | | |
| Calculated Tax (25%) | 1 130 400 | 12 201 419 |

2) Full currency agio on Equity (Previous method)

| | USD | NOK |
|----------------------------|------------|-------------|
| Profit Before Tax | 4 521 598 | 48 805 677 |
| Tax related agio on equity | 7 513 847 | 81 103 716 |
| Basis for Tax Calculation | 12 035 445 | 129 909 393 |
| | | |
| Calculated Tax (25%) | 3 008 861 | 32 477 348 |

The calculated tax for the period is 67% of the ordinary result before tax (compared to 25% tax rate for banks with Norwegian krone as functional currency).

The main reason is that even though the Bank's functional currency is USD, it is required to translate both P&L and the majority of assets and liabilities to NOK for tax purposes. Changes in net assets (equity) resulting from exchange rate will be subject to tax.

ASSETS

Note 6, Financial instruments at fair value.

The Bank measures fair values using the following fair value hierarchy, which reflects the significance of the inputs used in making the measurements.

Level 1: Inputs that are quoted market prices (unadjusted) in active markets for identical instruments.

Level 2: Inputs other than quoted prices included within Level 1 that are observable either directly (i.e. as prices) or indirectly (i.e. derived from prices). This category includes instruments valued using quoted market prices in active markets for similar instruments; quoted prices for identical or similar instruments in markets that are considered less than active; or other valuation techniques in which all significant inputs are directly or indirectly observable from market data.

Level 3: Inputs that are unobservable. This category includes all instruments for which the valuation technique includes inputs that are not observable, and the unobservable inputs have a significant effect on the instrument's valuation. This category includes instruments that are valued based on quoted prices for similar instruments for which significant unobservable adjustments or assumptions are required to reflect differences between the instruments.

Appendices

Appendix 1, Alternative Performance Measures

Formulas for calculation of Alternative Performance Measures

| <u>Ratio formulas</u> Cost/Income Ratio = Total operating expenses Total income |
|--|
| Return on equity before tax = $\frac{\text{Net profit before tax}}{(Equity \text{ start of the year-dividend+New equity*Yearfraction})}$ |
| $Year fraction = \frac{12 - Months \ before \ equity \ issue}{12}$ |
| Net Income Margin = (Interest-bearing assets start of year+Interest-bearing assets end of year)*0,5 |
| Net interest income (Interest-bearing assets start of year+Interest-bearing assets end of year)*0,5 |
| $Deposit to loan ratio = \frac{Total deposits}{Loans to customers}$ |
| $NPL \ ratio = \frac{Non \ performing \ exposure \ (loans \ to \ customers)}{Loans \ to \ customers} \qquad (non-performing \ loan \ ratio)$ |
| $Deposit ratio = \frac{Total deposits}{Total Assets}$ |
| $Loss allowance/Loan Ratio = \frac{Total \ Loss \ Alloance}{Loans \ to \ customers} $ (on performing loans) |
| LCR = Liquid assets relative to net liquidity outflow in a 30-day stress scenario. |
